AOT410L/AOB410L

100V N-Channel MOSFET

SDMOS™

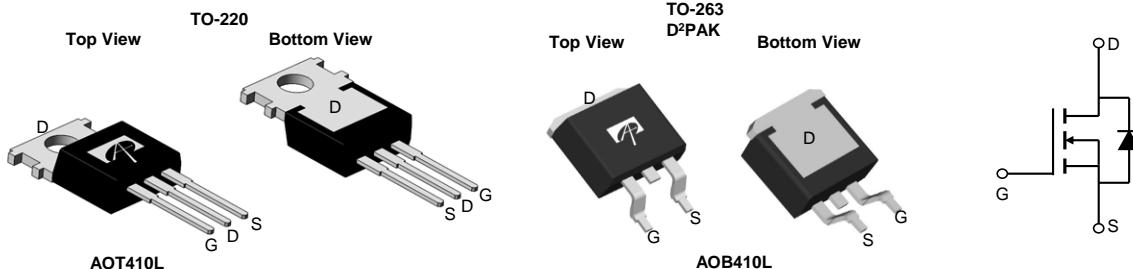

General Description

The AOT410L/AOB410L is fabricated with SDMOS™ trench technology that combines excellent $R_{DS(ON)}$ with low gate charge & low Q_{rr} . The result is outstanding efficiency with controlled switching behavior. This universal technology is well suited for PWM, load switching and general purpose applications.

Product Summary

V_{DS}	100V
I_D (at $V_{GS}=10V$)	150A
$R_{DS(ON)}$ (at $V_{GS}=10V$)	< 6.5mΩ (< 6.2mΩ*)
$R_{DS(ON)}$ (at $V_{GS}=7V$)	< 7.5mΩ (< 7.2mΩ*)

100% UIS Tested
100% R_g Tested

Orderable Part Number	Package Type	Form	Minimum Order Quantity

A. The value of $R_{\text{IJ(A)}}$ is measured with the device mounted on 1in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$. The Power dissipation P_{DSM} is based on $R_{\text{IJ(A)}}$ and the maximum allowed junction temperature of 150°C . The value in any given application depends on the user's specific board design, and the maximum temperature of 175°C may be used if the PCB allows it.

B. The power dissipation P_D is based on $T_{J(\text{MAX})}=175^\circ\text{C}$, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature $T_{J(\text{MAX})}=175^\circ\text{C}$. Ratings are based on low frequency and duty cycles to keep initial $T_J=25^\circ\text{C}$.

D. The $R_{\text{IJ(A)}}$ is the sum of the thermal impedance from junction to case $R_{\text{IJ(C)}}$ and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300 μs pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of $T_{J(\text{MAX})}=175^\circ\text{C}$. The SOA curve provides a single pulse rating.

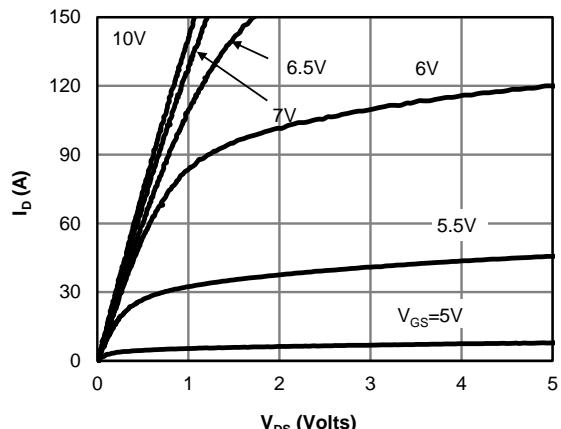

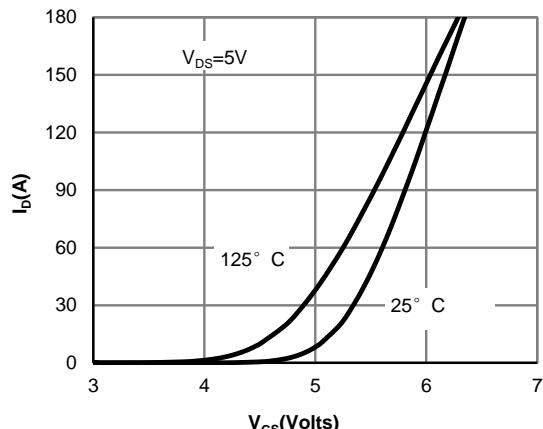

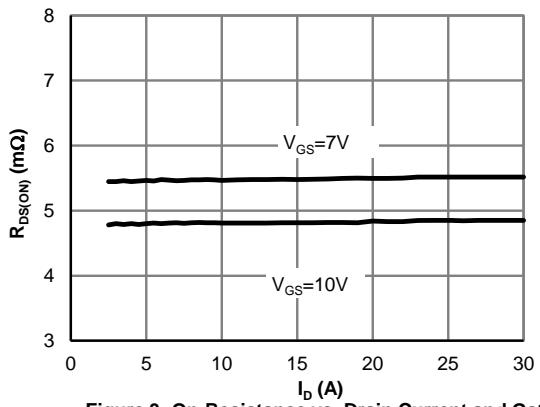

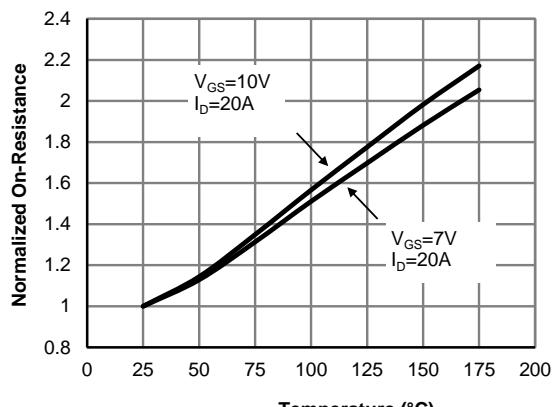

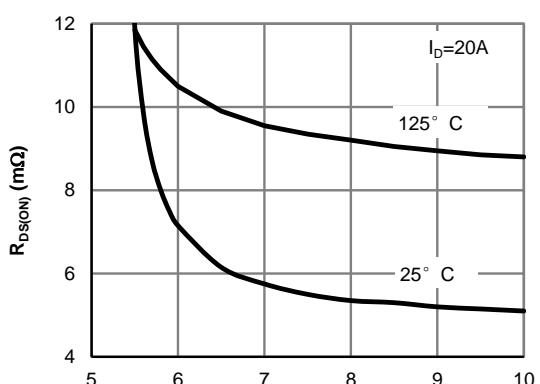

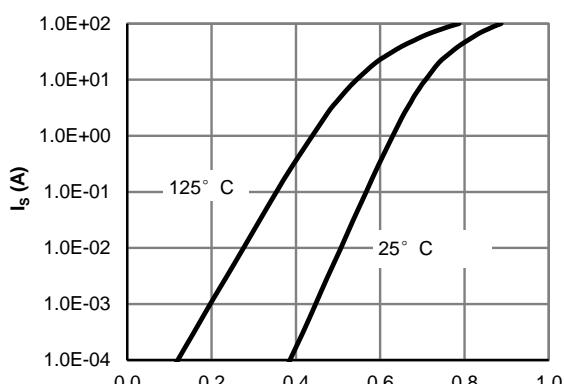

G. The maximum current limited by package.

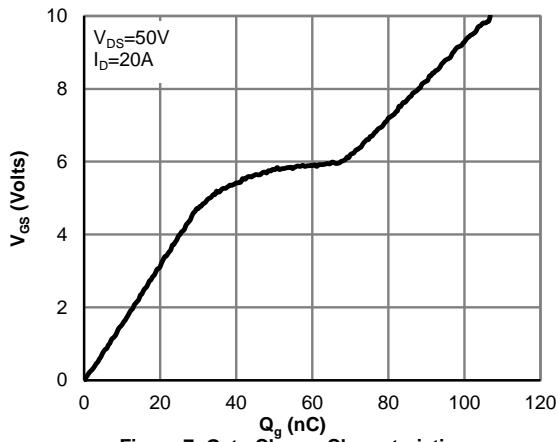

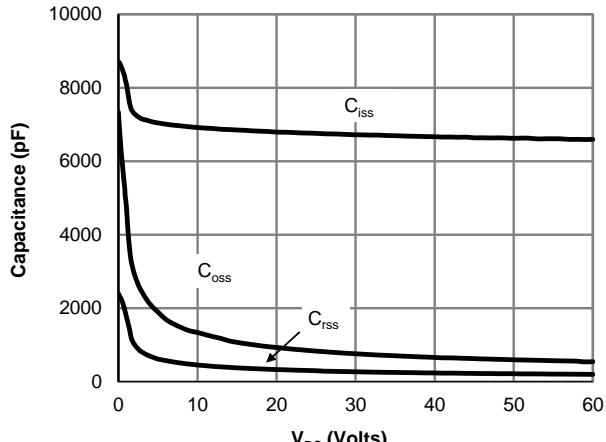

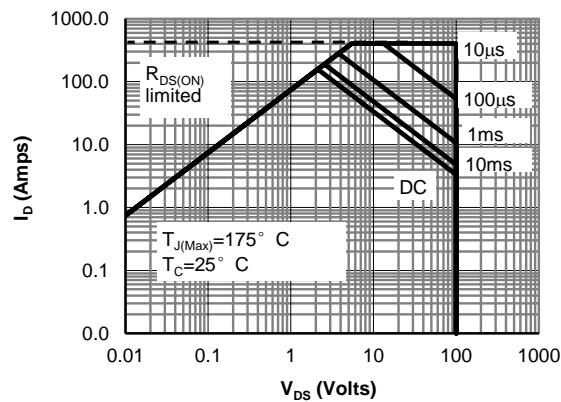

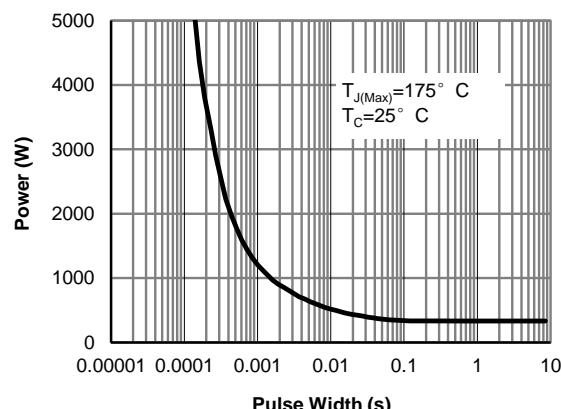

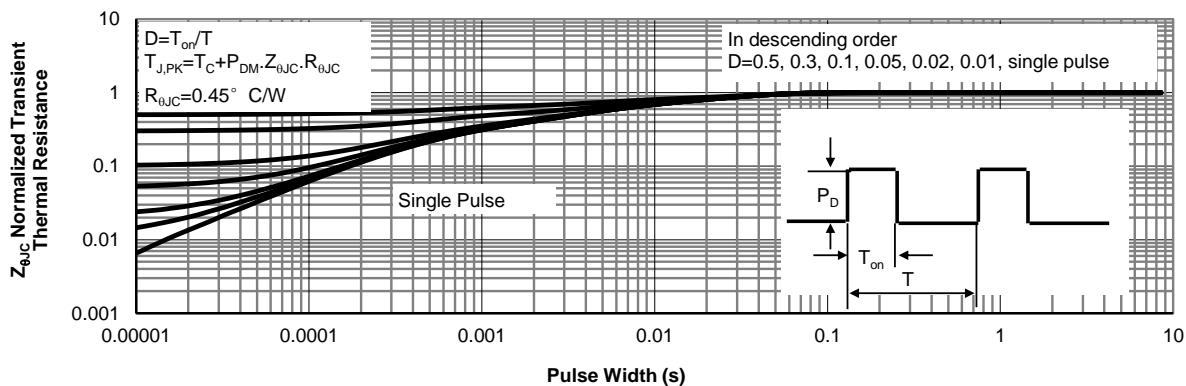

H. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$.
