AON6908A

30V Dual Asymmetric N-Channel MOSFET

General Description

The AON6908A is designed to provide a high efficiency synchronous buck power stage with optimal layout and board space utilization. It includes two specialized MOSFETs in a dual Power DFN5x6 package. The Q1 "High Side" MOSFET is designed to minimize switching losses. The Q2 "Low Side" MOSFET is an SRFET™ that features low $R_{DS(ON)}$ to reduce conduction losses as well as an integrated Schottky diode with low Q_{RR} and V_f to reduce switching losses. The AON6908A is well suited for use in compact DC/DC converter applications.

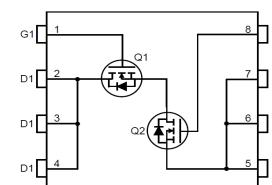

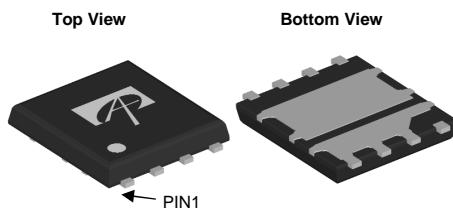

Product Summary

| | Q1 | Q2 |
|------------------------------------|---------|--------|
| V_{DS} | 30V | 30V |
| I_D (at $V_{GS}=10V$) | 46A | 80A |
| $R_{DS(ON)}$ (at $V_{GS}=10V$) | <8.9mΩ | <3.6mΩ |
| $R_{DS(ON)}$ (at $V_{GS} = 4.5V$) | <12.5mΩ | <4.5mΩ |

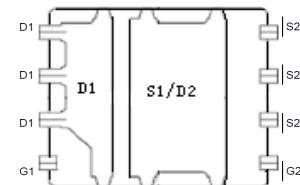

100% UIS Tested
100% R_g Tested

| t_r | Turn-On Rise Time | | | 9.5 | | ns |
| $t_{\text{D(off)}}$ | Turn-Off Delay Time | | | 18.5 | | ns |
| t_f | Turn-Off Fall Time | | | 4 | | ns |
| t_{rr} | Body Diode Reverse Recovery Time | $I_F=11.5\text{A}, dI/dt=500\text{A}/\mu\text{s}$ | 8 | 10.5 | 13 | ns |
| Q_{rr} | Body Diode Reverse Recovery Charge | $I_F=11.5\text{A}, dI/dt=500\text{A}/\mu\text{s}$ | 13 | 17.2 | 21 | nC |

A. The value of R_{0JA} is measured with the device mounted on 1in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$. The Power dissipation P_{DSM} is based on R_{0JA} and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.

B. The power dissipation P_D is based on $T_{J(\text{MAX})}=150^\circ\text{C}$, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature $T_{J(\text{MAX})}=150^\circ\text{C}$. Ratings are based on low frequency and duty cycles to keep initial $T_J=25^\circ\text{C}$.

D. The R_{0JA} is the sum of the thermal impedance from junction to case R_{0JC} and case to ambient.

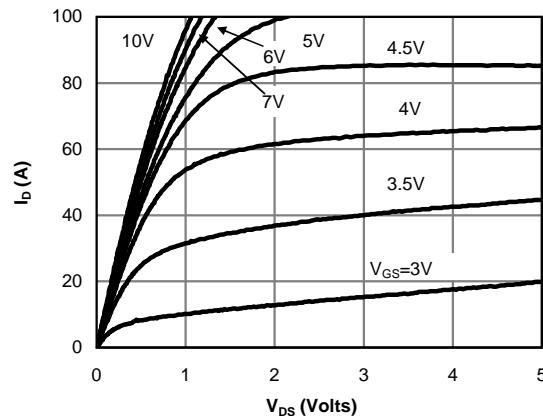

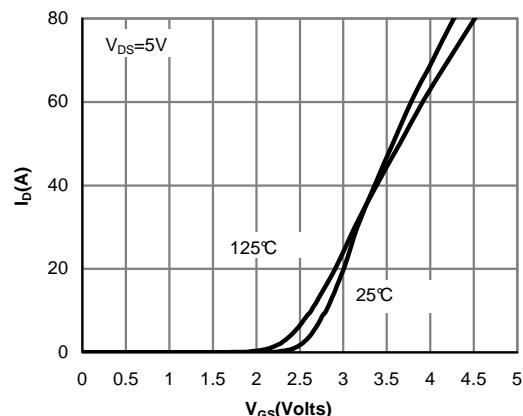

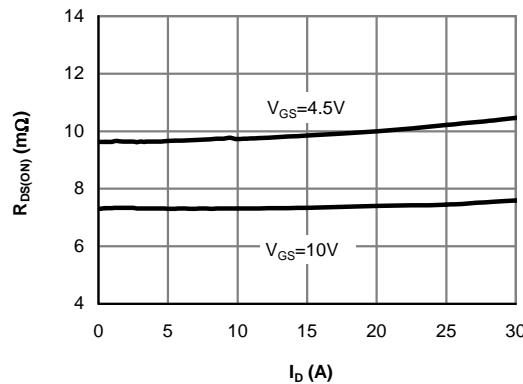

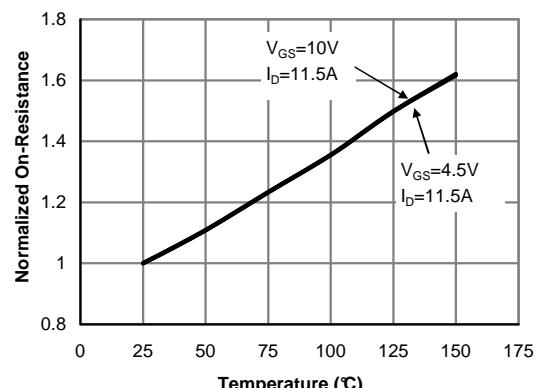

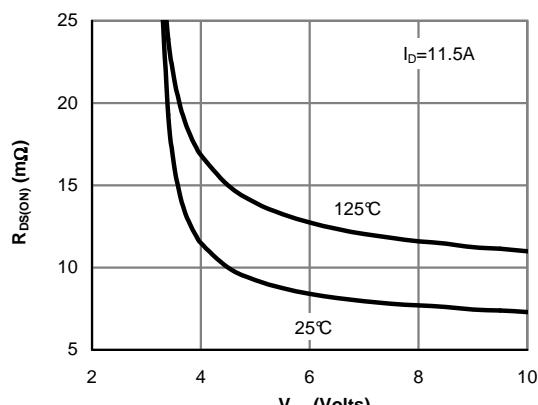

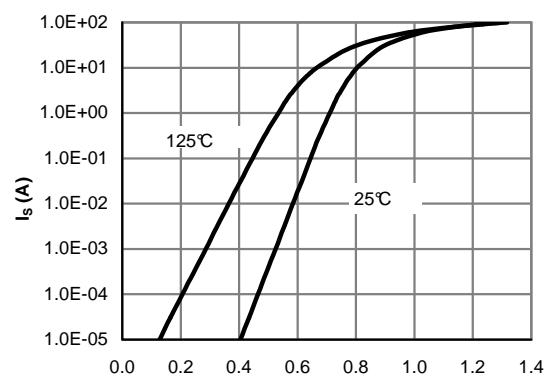

E. The static characteristics in Figures 1 to 6 are obtained using <300μs pulses, duty cycle 0.5% max.

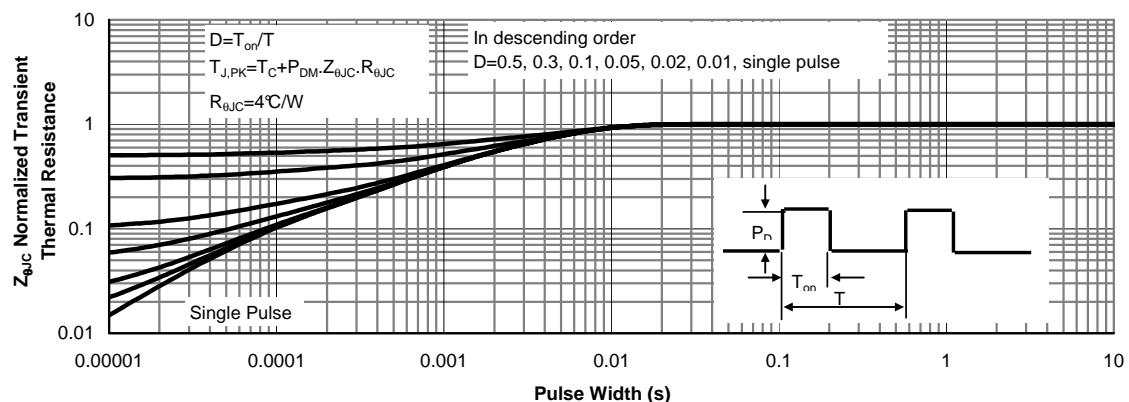

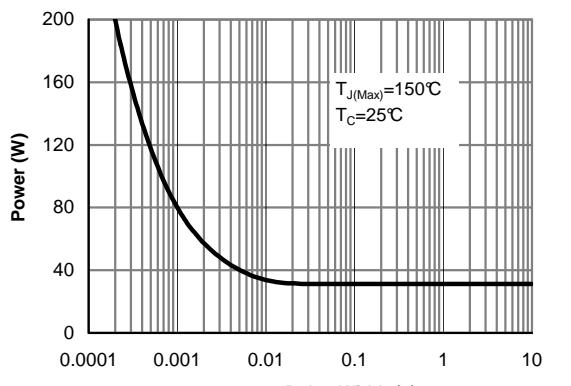

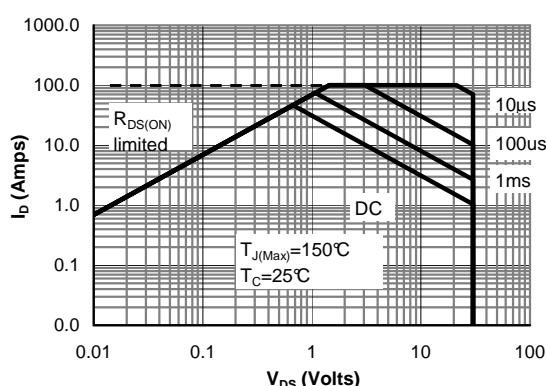

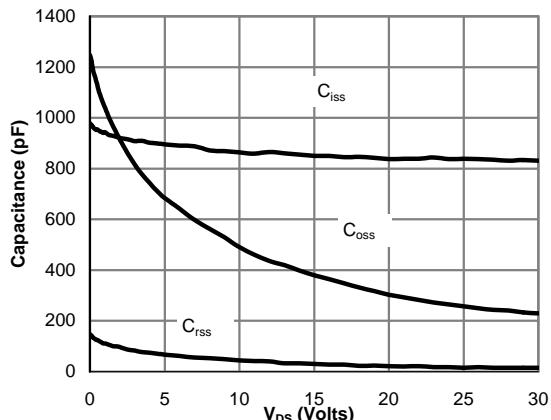

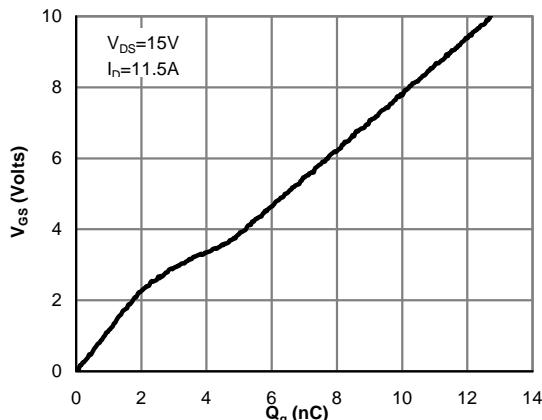

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of $T_{J(\text{MAX})}=150^\circ\text{C}$. The SOA curve provides a single pulse rating.

G. The maximum current rating is limited by package.

H. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with TA=25°C.
